

Directions

1. Unroll the kite so the center spine faces you. (back of the kite)
2. Place the two loose spars into the dihedral on the center spine and then into the wing - tip.
3. Tie your line onto the tow point (small loop) of the bridle and unroll the tail.

Tips and Tricks!

1. Kites fly best in wide open spaces. Avoid flying in areas near buildings and trees.
2. To launch, stand with the wind to your back.
3. Hold the kite with the nose up in one hand while securely holding the winder in the other.
4. When you feel the pressure of the wind against the kite, let go. As the kite rises, slowly release the line.
5. A high altitude launch is an effective method of getting your kite off the ground in light winds. Have someone stand downwind as you let out as much line as possible (>100 feet). As the kite is released into the wind, tug on the line.
