

Designer

Goodwinds is a mother and son team (Kathy Goodwind and Todd Hostetter) that has designed award winning kites and wind related products for over 25 years. In addition, Kathy has been at the forefront of the development of kiting as an industry and sport.

Directions

1. With the kite on a flat surface and the pocket side facing you take the two white spars and insert ends into the pockets adjacent each other. Make sure all 3 white spars intersect through O-ring. Refer to illustration.
2. Take the black cross spar and insert it through the top bridle loop, if it's not already. Insert ends into side pockets and make sure spar is on top of white spars. Refer to illustration.
3. Flip kite over to the front side and secure the end of your flying line to the loop on the bridle. Remove rubber bands and unroll tails.

Tips and Tricks!

1. Kites fly best in wide open spaces. Avoid flying in areas near buildings and trees.
2. To launch, stand with wind to your back.
3. Hold the kite with the nose up in one hand while securely holding the winder in the other.
4. When you feel the pressure of the wind against the kite, let go. As the kite rises, slowly release the line.
5. A high altitude launch is an effective method of getting your kite off the ground in light winds. Have someone stand downwind as you let out as much line as possible (>100 feet). As the kite is released into the wind, tug on the line.
