

Directions

1. Unroll the kite and make sure that the spreaders are slid to the ends of the leading edge on either side.
2. Next, bend the leading edge spars and insert them into the pockets as shown. NOTE: Doing this creates a very high tension bow in the sail to give it the shape it needs.
3. Insert the cross strut into the connectors on both sides of the kite.
4. Attach flying line to keel.

Tips & Tricks!

1. Kites fly best in wide open spaces. Avoid flying in areas near buildings and trees.
2. To launch, stand with the wind to your back.
3. Hold the kite with the nose up in one hand while securely holding the winder in the other.
4. When you feel the pressure of the wind against the kite, let go. As the kite rises, slowly release the line.
5. A high altitude launch is an effective method of getting your kite off the ground in light winds. Have someone stand downwind as you let out as much line as possible (>100 feet). As the kite is released into the wind, tug on the line.
