

Directions

1. Unroll the kite and place it face down.
2. Assembly is best done in sections. Start at one end of the kite by inserting the short spreader spar into the loops of 2 cells.
3. Run the longer crossing spars horizontally from one pocket in the center of the wingtip, through the holes in the center of the 4 panels, on through to the wingtip pocket on the opposite side.
4. Repeat for the remaining cells.
5. Attach line to the toe point (small loop) on the bridle.

Tips & Tricks!

1. Kites fly best in wide open spaces. Avoid flying in areas near buildings and trees.
2. To launch, stand with the wind to your back.
3. Hold the kite with the nose up in one hand while securely holding the winder in the other.
4. When you feel the pressure of the wind against the kite, let go. As the kite rises, slowly release the line.
5. A high altitude launch is an effective method of getting your kite off the ground in light winds. Have someone stand downwind as you let out as much line as possible (>100 feet). As the kite is released into the wind, tug on the line.
