

Directions

1. Unfold kite and make sure the bridle line is free and untangled.
2. Start at the top of the kite and insert one of the spar ends in between the two pieces of nylon that make up the wing tip.
3. Insert the other spar end into the opposite wing tip (see illustration).
4. Work your way around each section repeating these two steps.
5. Tie your flying line to the tow point (small loop) located on the bridle.

Tips & Tricks!

1. Kites fly best in wide open spaces. Avoid flying in areas near buildings and trees.
2. To launch, stand with the wind to your back.
3. Hold the kite with the nose up in one hand while securely holding the winder in the other.
4. When you feel the pressure of the wind against the kite, let go. As the kite rises, slowly release the line.
5. A high altitude launch is an effective method of getting your kite off the ground in light winds. Have someone stand downwind as you let out as much line as possible (>100 feet). As the kite is released into the wind, tug on the line.
