

Directions

1. Slide the Leading Edge Spar (stick) down the sleeve, away from the nose, to the bottom of the wing (trailing edge).
2. Locate the Spreader and insert into the reinforced pockets on the back side of the kite.
3. Tie your flying line onto the tab Located on the keel and unroll the tail.

Tips & Tricks!

1. Kites fly best in wide open spaces. Avoid flying in areas near buildings and trees.
2. To launch, stand with the wind to your back.
3. Hold the kite with the nose up in one hand while securely holding the winder in the other.
4. When you feel the pressure of the wind against the kite, let go. As the kite rises, slowly release the line.
5. A high altitude launch is an effective method of getting your kite off the ground in light winds. Have someone stand downwind as you let out as much line as possible (>100 feet). As the kite is released into the wind, tug on the line.
